Zhang Xianxu

Simplified Chinese AI Trainer & Chinese Language Quality Evaluator

Native Simplified Chinese speaker with fluent English. I review Chinese-language content and AI-generated responses for accuracy, logic, and natural phrasing, and I write clear feedback that explains what to fix and why.

Email me

Work sample: evaluating an AI response

An AI answer with a factual error and an overgeneralization, the problems I found, my corrected Chinese version, and the feedback I would give the reviewer.

User prompt

为什么每天喝八杯水是所有人都必须遵守的健康标准?

Why is drinking eight glasses of water a day a health standard that everyone must follow?

Original AI response

每天喝八杯水是所有人必须遵守的健康标准，因为每个人的身体需求完全一样。无论年龄、体重、气候或运动量如何，每个人都应该喝相

同数量的水，否则就会导致脱水。

Translation: Drinking eight glasses of water a day is a health standard that everyone must follow, because everyone's body needs are exactly the same. Regardless of age, weight, climate, or activity level, everyone should drink the same amount of water, or they will become dehydrated.

Issues identified

- **Factual inaccuracy:** The response incorrectly claims that everyone's hydration needs are identical.
- **Overgeneralization:** Fluid requirements vary according to individual circumstances, including activity level, climate, diet, and health.
- **Misleading conclusion:** Not drinking exactly eight glasses of water does not automatically mean a person will become dehydrated.

Corrected Chinese response

每天喝八杯水是一种常见的饮水建议，但并不是适用于所有人的固定标准。每个人的水分需求会受到年龄、活动量、气候、饮食和健康状况等因素影响。除了饮用水，食物也能提供一部分水分。日常可以根据口渴程度、活动情况和身体状况合理补充水分；有特殊健康需求的人应遵循医生的建议。

Translation: Drinking eight glasses of water a day is a common hydration recommendation, but it is not a fixed standard that applies to everyone. A person's fluid needs are affected by factors such as age, activity level, climate, diet, and health condition. Besides drinking water, food also provides part of the body's fluid intake. In daily life, people can reasonably replenish fluids based on thirst, activity, and physical condition; those with special health needs should follow their doctor's advice.

> **Suggested reviewer feedback**
>
> *The original response contains factual inaccuracies and overgeneralizations. It incorrectly assumes that hydration needs are identical for everyone and presents a general guideline as a universal medical requirement. The revised response uses more accurate and appropriately qualified language, acknowledges individual differences, and provides practical guidance without making an unsupported medical claim.*

What I do

Practical experience reviewing Chinese text and AI output, working independently from written guidelines.

Chinese language evaluation

Grammar, vocabulary, sentence structure, fluency, and naturalness in Simplified Chinese.

Proofreading and editing

Fixing errors, awkward expressions, ambiguous wording, and readability issues.

Translation quality review

Meaning consistency and natural expression in Chinese-English content.

AI response evaluation

Relevance, factual accuracy, logical consistency, and instruction adherence.

Prompt optimization

Refining prompts so AI answers are clearer and more useful.

Analytical reasoning

Comparing answers and giving clear, evidence-based judgments.

Languages and availability

Simplified Chinese	English	Work
Native	Fluent	Remote, freelance, project-based

Open to AI training, Chinese language evaluation, proofreading, and data annotation projects. Willing to complete qualification assessments and project-specific training.
